

Hole Peg Test

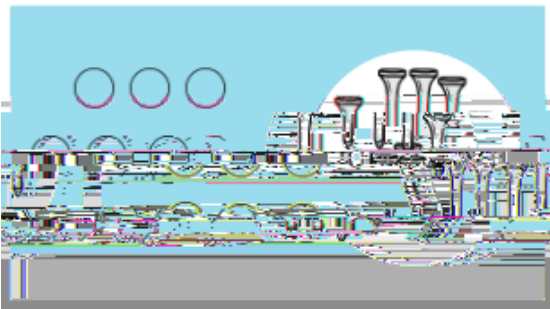

A Test to Evaluate Finger Dexterity

What s the purpose

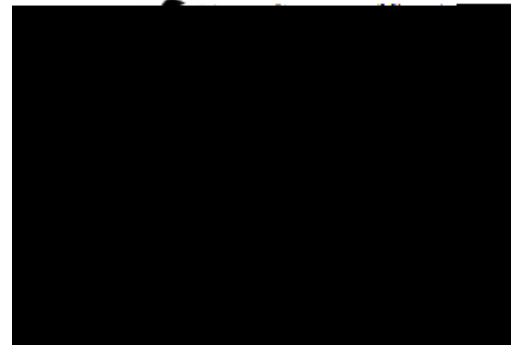

The 9-Hole Peg Test is used to evaluate finger dexterity -- or how well you can use your fingers -- in people with various neurological conditions including stroke, Parkinson's disease, multiple sclerosis and brain injury.

What do I have to do

Your therapist will time you while you perform this test. The goal is to go as fast as possible while moving the pegs into and out of the holes on the board. You will do the test first with one hand, and then the other.

The pegboard will be placed directly in front of you on a table and all the pegs will be in the container.

Pick up the pegs one at a time using one hand and place them in the
